SUBJECT INDEX

accident investigations 18–22
aerodynamics, effects of heat transfer 267–303
aerofoils
  heat transfer effects 285–289
  RAE 131
  vehicle dynamics simulation 122–132
airbreathing propulsion 201–235
aircraft
  flight simulation 1–120
analogue simulation 10–14
astronautics 17

Bell Telephone Laboratories 12
boundary layers *see* heat transfer, internal transonic flows, vehicle dynamics
British Aerospace 38

Cessna Citation 500 80–96, 114–115
channel flow *see* internal transonic flows
control theory 307–310
Curtiss–Wright 12–13, 15

DHC-2 Beaver 46–57, 75–80, 115
digital simulation *see* real-time digital simulation

fixed wing aircraft
  flight simulation 1–120
flight management system 19
flight simulation techniques 1–120
flight simulators 16–117
    Advanced Flight Deck simulator 21–22
    Advanced Technology Testing Aircraft System 24–25
    Advanced Technology Testing Helicopter System 24
    applications 16–25
    cockpits 31–33
    critical maneuvers 116
    Curtiss–Wright Z-1 12–13
    Flight Simulator for Advanced Aircraft 20–21
    ground-based facilities 18–22, 24
    history 10–16
    in-flight simulators 23–25
    Link C-11 12–13
    Man–Vehicle Research Facility 21
    piloted flight simulators 25–40
    real-time digital computer 14, 25–31
    research and development simulators 18–22
    Roeder's aeroplane model 10–11
    Rotorcraft System Integration Simulator 21–22
    testing 113–116
    Total In-Flight Simulator 23–24
    training simulators 16–18
    Universal Digital Operational Flight Trainer 14
    Vertical Motion Simulator 21
  flight test data 13, 80–96
    measurement system 83–84
ground-based trainers 7–12, 18–22
history 6–16
mathematical modelling 26, 40–96
  aerodynamic model 46–49
  a priori models 81–83, 88–96
  Computer Generated Checkout 93–94, 113, 115
  engine model 49–51
  equations of motion 40–51
  ground handling 75–80
  landing gear model 75–80
  Proof of Match 93–96, 113, 115–116
  system identification techniques 84–88
  turbulence 51, 58–71
  wind shear 51, 71–75
motion systems 14–15, 37–40
  6DOF systems 14, 22–23, 38
  motion cue generation 104–113
  special effects 113
  synergistic motion systems 38–39
  testing 114
reference frames 5–6
visual systems 14–16, 33–37
  closed circuit television 15–16, 33–36
  computer generated image systems 16, 34–35
  helmet mounted visual display system 37
  laser projection 33–36
  out-of-the-window simulation 33, 96–104
  shadowgraphs 14, 34
  testing 114
flow control *see* turbulent shear flows
flow instability *see* internal transonic flows, turbulent shear flows
flow separation *see* heat transfer, turbulent shear flows, vehicle dynamics
flow visualisation *see* Particle Image Velocimetry
fly-by-wire control 23–25

heat transfer, effects on aerodynamics 267–303
  aerodynamic measurements 277–295
    combat aircraft 297, 300
    delta wing 283–285
    flat plates and cones 277–279
    gliders 298–299
    pressure measurements 285–293
    transport aircraft 298
    turbulent skin friction 278–279
    unswept wing 279–283, 296
  boundary layers 269–271, 277–283
  flow separation 268–276, 279–283, 298–303
  scale effects 268, 273
  shear layer development 268–276
  subsonic flows 274–276
  transonic flows 276
  wind tunnel tests 285–289, 293–300
hypersonic combustion 210–224, 229–233

internal transonic flows 145–200
  convergent–divergent nozzles 146–147, 152–164, 226–229

experimental observations 152–161
theoretical modelling 161–164
curved ducts 146–152, 198
duct cross-section 146–147, 165–185
long enlarged cross-section 165–172
short enlarged cross-section 172–185
jet–cavity interaction 146–147, 185–198
jet regurgitant mode 186–191, 195–198
oscillation ranges 195–198
screech mode 191–198
self-excited oscillations 145–200
sudden enlargement of duct cross-section 146–147, 165–185
asymmetric oscillation 182–183
base pressure oscillation 169–172
shock pattern oscillation 166–169
supersonic flows 183–185, 198
symmetrical oscillation 175–182

lasers *see* flight simulation techniques, Particle Image Velocimetry

mathematical modelling
convergent–divergent nozzles 161–164
flight simulation 26, 40–96
McDonnell–Douglas Corporation 16

NASA 21, 38
National Aerospace Plane (NASP) 220–221, 233
noise *see* internal transonic flows
nozzles *see* internal transonic flows

oscillations
self-excited 145–200
vehicle dynamics 123–132

Particle Image Velocimetry (PIV) 237–265
camera system 241–242, 261–265
data reduction system 249–250, 261
experimental set-up 238–250, 261
film 241–242, 261, 263–265
Gonish incense 253–259, 261
laser system 238–241, 252–253, 259–265
polarisation effects 248–249
light balance calculation 263–265
particle size 242–249
seeding materials 242–249
styrene 253–259, 261
turbomachinery 259–261

RAE 21, 24, 38
ramjets 201–210, 224–234
applications 206–210
France 207–209
Russia 206–207
USA 209–210
ducted rockets 204–205
liquid fuel ramjets 202–203
solid fuel ramjets 203–204
test facilities 224–233
ramrockets 202, 205–206, 229–230, 233
real-time digital simulation 14–120
rockets 201–235
ducted rockets 204–205
hybrid rockets 205–206
ramrockets 202, 205–206, 229–230, 233

scramjets 202, 210–234
aerodynamic losses and integration 214–218
hypersonic combustion 210–224, 229–233
research 218–224
Australia 219, 222, 234
France 218, 221, 234
Germany 219, 221–223, 233
Japan 219, 224, 234
National Aerospace Plane (NASP) 220–221, 233
UK 218, 222–224, 233
USA 218–221, 233
supersonic combustion 210–224, 229–233
test facilities 224–233
theoretical cycle analysis 211–213
self-excited oscillations 145–200
shear layers
heat transfer effects 268–276
internal transonic flows 145–200
turbulent shear flows 305–287
shock waves *see* internal transonic flows
space shuttle 21, 23
sub-micron particle visualisation *see* Particle Image Velocimetry
subsonic flows
heat transfer effects 274–276, 285–289, 293–295
supersonic combustion 210–224, 229–233
supersonic flows
internal transonic flows 145–200
Particle Image Velocimetry 237–265

Telecommunications Research Establishment 12
test facilities
ramjets and scramjets 224–233
air-connected pipe tests 225–228
free-jet tests 225, 226–229
free-piston shock tunnel 229–233
wind tunnels 121–144, 267–303, 372
transonic flows
heat transfer effects 276, 285–289, 293–295
internal transonic flows 145–200
Particle Image Velocimetry 237–265
turbomachinery
Particle Image Velocimetry 259–261
turbulent shear flows 305–387
coherent structures 311–313, 334–335
control theory 307–310
flow control 305–387
active control 309, 317–318, 321–325, 335–336
passive control 309, 318–319, 325–331, 336–341
flow management 305–387
free turbulent shear flows 313, 316–341
global flow management 372
jet flow 313, 316–331, 333
mixing layers 333–341
optimized design 309–310
wakes 331–333, 353–355
wall-bounded turbulent shear flows 341–372
base-drag flow 358–359, 366–372
boundary conditions 342–347
flow reattachment 357–372
flow separation 357–372
free-stream turbulence 347–353
upstream flow unsteadiness 353–355
vortices 355–357

vehicle dynamics
aerofoil aerodynamics 122–132
flow separation 131–132

pitching oscillations 123–124
plunging oscillations 124–132
body aerodynamics 132–142
high alpha aerodynamics 136–142
nonplanar motion effects 135–136
wing rock 139–142
boundary layer transition effects 121–144
extrapolation 142
Magnus lift characteristics 126–127, 138
moving wall effects 127–131, 136–142
scaling problems 121–144
unsteady viscous flow 122
wind tunnel simulation 121–144

wind tunnels
global flow management 372
heat transfer effects on aerodynamics 267–303
vehicle dynamics simulation 121–144
